maximum supply fixed forever

Phase 1

now live genesis to 1M

01 · THE BELIEF

We don't build platforms. We build for people who were never invited to the table.

Most of the world works. They drive. They deliver. They care for others. They show up, day after day, and contribute something real to the world around them. And yet, when it comes to the digital economy — to crypto, to Web3, to the promise of decentralised finance — they are an afterthought. The systems were not built for them. The language was not written for them. The rewards were not designed with them in mind.

We believe this is wrong.

We believe that the value of a person's contribution — however small, however daily — deserves to be recognised, rewarded, and remembered.

That belief is why MyVanga exists. Not to build another token. Not to chase liquidity or speculative returns. But to answer a question the financial world has never bothered to ask: what if the people who show up every day were the ones who benefited most?

Contribution is the new capital.

Not speculation. Not early access. Not who you know or how much you already own. What you do. What you build. How you show up. That is the currency of MyVanga.

THE THREE PRINCIPLES

PRINCIPLE 1

Everyone who contributes deserves to earn — regardless of how much they already own.

PRINCIPLE 2

Trust is built slowly, governed carefully, and never handed to a system before it is ready.

PRINCIPLE 3

An economy is only as strong as the people who believe in it — and act on that belief every day.

These are not aspirations. They are the architecture. Every decision about tokenomics, governance, emission rates, and product design flows from these three principles. If it does not serve the contributor, it does not belong in MyVanga.

We did not set out to disrupt finance. We set out to include the people finance forgot.

That is the why. Everything else in this document is the how.

THE TEAM

MyVanga was built by a team that believes its names should matter less than its work — and its work will be judged not by the credentials of its founders, but by whether Arjun, one year from now, looks at his balance and knows that something was built that was truly meant for him.

02 · THE PROBLEM

The system isn't broken. It's working exactly as designed — just not for everyone.

That distinction matters. A broken system is an accident waiting to be fixed. A system that works as designed — but was designed to exclude — requires something more deliberate than a patch. It requires a replacement.

You cannot save your way into financial inclusion if every saving mechanism requires you to already be included.

THE SCALE OF EXCLUSION

Crypto democratised the technology. It did not democratise the opportunity.

Instead of creating a new economy for the excluded, most of the crypto industry recreated the old one — with better marketing. The people who benefited most were those who already had disposable income to risk, the technical literacy to navigate wallets and gas fees, and the time to monitor volatile markets.

THE OLD WORLD VS THE MYVANGA MODEL

THE OLD MODEL	THE MYVANGA MODEL
× You earn by owning	→ You earn by contributing
× Early access rewards insiders	→ Early participation rewards the consistent
× Complexity excludes the unfamiliar	→ Simplicity is a design requirement

× Governance belongs to the wealthy

→ Governance grows with the community

× Speculation drives value

→ Contribution drives value

MyVanga is not a protest against that system. It is a replacement for it. That replacement starts with a single belief: contribution is the new capital.

03 · THE PERSON

Meet Arjun. He works hard. The system just wasn't built for him.

Arjun is 28. He lives in a two-room flat in Coimbatore with his younger sister and their mother. He drives for a ride-sharing platform six days a week — sometimes ten hours a day. He is not lazy. He is not unskilled. He is not waiting for an opportunity.

“He has heard of crypto. He dismisses it. ‘That’s for people with money to lose.’ He’s right — because until now, it was.”

Arjun R. · Gig worker · Coimbatore, Tamil Nadu

₹18,000/mo

avg. monthly income

Zero

investments or savings

6 days/wk

worked, consistently

Arjun is not a persona invented for a whitepaper. He is hundreds of millions of people — the delivery rider in Lagos, the domestic worker in Manila, the street vendor in São Paulo, the freelance tailor in Dhaka. All of them working. All of them contributing something real. None of them with a seat at the table of the digital economy.

ARJUN'S FIRST YEAR ON MYVANGA

DAY 1 · 7:14 AM

Opens MyVanga. Taps “mine”.

One action. Four seconds. He earns 1 MYVA for showing up today. No investment required. No prior knowledge of blockchain. No gas fees. Just presence.

+1 MYVA earned

DAY 1 · 9:30 AM

Refers his friend Karthik.

Karthik drives for the same platform. Arjun sends a link. Karthik joins. Arjun's daily earning rate increases — not because he gamed a system, but because he brought someone real.

+9% daily boost

DAY 7**Streak bonus activates.**

He has shown up seven days in a row. MyVanga recognises consistency as contribution — because it is. His rate increases by 5%.

+5% streak bonus

MONTH 6**His balance has meaning.**

180 days of showing up. He uses some MYVA for credits. He locks some voluntarily. For the first time, he is not just a user — he is part-owner.

Contributor → Stakeholder

YEAR 2**He votes on his first governance proposal.**

His voice carries weight — not because of how much he owns, but because of how long he has shown up.

Stakeholder → Governor

Arjun did not change. The system did. That is the point.

MyVanga does not ask Arjun to become an investor, a developer, or a crypto enthusiast. It meets him where he is — with a phone, a few minutes a day, and the simple act of showing up. What changes is what showing up is worth.

MyVanga does not exist despite people like Arjun. It exists because of them.

04 · THE ECOSYSTEM

MyVanga is not an app. It is an economy — and you are not a user. You are a founder.

Most platforms are extractive by design. You give them your time, your attention, your data, your network — and in return, you receive a service. The value you create flows upward, to shareholders and advertisers who will never know your name.

Most platforms ask: how do we grow our users? MyVanga asks: how do we grow our contributors? The difference is not semantic. It is the entire business model. Because contributors are not users — in MyVanga, contribution is the new capital.

FOUR INTERCONNECTED LAYERS

01 · The Foundation — MyVanga Mainnet

A custom Layer 1 blockchain built for contribution-based economies. Not borrowed infrastructure — purpose-built, so the rules of the network reflect the values of the community from the ground up.

02 · The Protocol — \$MYVA

The token that flows through everything. Earned through participation. Spent on utility. Locked for greater stake. Voted with in governance. It is not a speculative asset — it is the native currency of contribution.

03 · The Applications — where daily life happens

MyVanga Connect, MyVanga Charm, MyVanga Fund, and the Marketplace. Each app is a place where \$MYVA has real, immediate utility — so the token is never an abstraction. It does something useful today.

04 · The Governance — community ownership, earned over time

A phased transition from core team stewardship to full community DAO. Governance is not given away on day one — it is built, tested, and transferred as the community proves it is ready.

THE APPLICATIONS

MyVanga Connect

Communication with value

Voice and text credits, premium identity features, and verified community presence. Being known and reachable should not be a privilege of the wealthy.

\$MYVA for credits and premium IDs

MyVanga Charm

Connection with dignity

Social and dating features with queue access and visibility boosts. Connection should not require a credit card.

\$MYVA for boosts and access

MyVanga Fund

Crowdfunding with community backing

Fundraising matches, donor recognition, and community-backed projects. The power to mobilise resources should not require a bank account.

\$MYVA for matches and badges

Marketplace

Commerce that rewards loyalty

Token-gated products, cashbacks on purchases, and exclusive contributor access. Every transaction strengthens the economy that powers it.

\$MYVA for cashbacks and access

Every person who joins MyVanga is not adopting a product. They are joining an economy — one designed to work for them from the first line of code.

05 · THE TOKEN

\$MYVA is not a bet on the future. It is a record of what you did today.

Most tokens are born from a promise. Buy now, the logic goes, and benefit later when the project delivers. \$MYVA is built on an entirely different premise. You do not buy it. You earn it. It is not a promise of future value — it is a record of present contribution.

When you hold \$MYVA, you are not holding speculation. You are holding proof of work — not in the computational sense, but in the human one.

THE NUMBER THAT DEFINES EVERYTHING

11,011,011,011

Maximum \$MYVA ever in existence — fixed forever

This number carries the energy of 11:11 — a symbol recognised across cultures as a moment of alignment, of hope, of something meaningful beginning. We chose it deliberately. Not as mysticism — but as a reminder that MyVanga was built with intention, for people who deserve to believe that showing up at the right moment can change everything.

TOKEN ALLOCATION

%	Category	Amount (MYVA)
60%	Mining and contribution rewards The community earns the majority. Always.	6,606,606,607
10%	Team and advisors Locked 6 years. 1-year cliff, linear vesting.	1,101,101,101
9%	Treasury and grants Locked until DAO activation.	990,990,991
9%	Community incentives and referrals Streaks, bounties, viral campaigns.	990,990,991

6%	Governance and staking access Future DAO voting and staking.	660,660,661
6%	Liquidity and exchange support Locked until CEX/DEX listing opens.	660,660,660

Six in every ten tokens ever created go directly to the people who contribute. That single decision — 60% to miners — is the clearest values statement in this entire document.

EMISSION LOGIC

On day one, every active contributor earns 1 MYVA per day. That rate decays by 10% every six months — not as a punishment, but as a protection. It keeps the 11,011,011,011 cap meaningful and rewards those who believed first.

Launch		1.000 / day
Month 6		0.900 / day
Month 12		0.810 / day
Month 18		0.729 / day
Month 24		0.656 / day
Month 30		0.590 / day
Month 36		0.531 / day

WAYS TO EARN MORE

HOW	WHAT IT REWARDS	BOOST
7-day mining streak	Consistency. Showing up every day.	+5%
30-day mining streak	Deep commitment to the community.	+10%
First 10 referrals	Bringing genuine people in.	+9% each
Next 50 referrals	Growing the network responsibly.	+6% each
Further referrals	Sustained community growth.	+3% each
Voluntary lockup	Belief in the long-term. 90 or 180 days.	Mining boost

- *11,011,011,011. Fixed. Forever. A number that encodes both the discipline of scarcity and the spirit of hope — because a token that means something must be built on both.*

This is what \$MYVA means. Contribution is the new capital — and this is what it looks like when a system is built to prove it.

06 · THE ROADMAP

Decentralisation is the destination. Trust is how you get there.

There is a pattern in the crypto industry that MyVanga refuses to follow. A project launches, declares itself decentralised, transfers governance to a DAO on day one — and then quietly watches as a small group of well-resourced early holders accumulates enough tokens to control every vote that follows.

MyVanga will decentralise. But it will do so the way a community earns anything worth having — slowly, deliberately, and only when it is genuinely ready.

FOUR PHASES · ONE DIRECTION

PHASE 1

Foundation — Core Team Governance

0 to 500,000 contributors

Every meaningful structure begins with someone willing to take responsibility before the crowd arrives. In Phase 1, the MyVanga Core Team holds the decisions. Community feedback flows continuously through polls and open dialogue.

- Daily mining at 1 MYVA per day, with referral and streak boosts
- MyVanga app ecosystem — Connect, Charm, Fund, Marketplace live
- Optional KYC for enhanced mining boosts
- Voluntary token lockups for 90 and 180 days

PHASE 2

Council — The Community Finds Its Voice

500,000 to 1,000,000 contributors

Half a million contributors is not a user base. It is a community. Phase 2 sees the formation of the MyVanga Advisory Council — drawn from those who have shown up most consistently, referred most genuinely, and contributed most meaningfully.

- MyVanga Advisory Council formed from top miners and contributors
- Structured community proposals on features and ecosystem priorities
- Advisory voting on non-critical decisions
- Transparent reporting on treasury and token emission

PHASE 3**Readiness — Preparing the Community to Govern**

Post 1,000,000 contributors

One million contributors is a milestone, not a finish line. Phase 3 is the preparation for full decentralisation: the infrastructure, the education, and the trust-building that a real DAO requires.

- Limited DAO voting — advisory on features, mining, and grant distribution
- Treasury unlocks — first community-directed grants activated
- Supply compression plan activated — optional token burns
- CEX and DEX listing preparation — liquidity allocation unlocked
- Legacy Vault feature — wallet inheritance planning

PHASE 4**Sovereignty — The Community Takes the Wheel**

MyVanga Mainnet and full DAO transition

This is what everything before it was building toward. MyVanga becomes what it always intended to be: a community-owned, community-governed digital economy — running on its own blockchain, with its treasury controlled by its contributors.

- MyVanga Mainnet — custom Layer 1 blockchain fully live
- Full DAO activation — token-weighted governance over treasury
- Phase 1 balances audited, verified, and migrated to Mainnet
- Dynamic tokenomics — community may evolve the model through DAO
- MyVanga ecosystem expansion — new apps and community initiatives

Each phase is triggered by contributor milestones — not calendar dates. Growth earns the transition.

MyVanga centralises responsibility at the start so it can decentralise power for good.

The road to sovereignty is built by the people walking it. Every contributor who mines today, refers a friend, and maintains a streak is not just earning tokens — they are shortening the distance to Phase 4.

07 · THE VISION AT SCALE

Ten million people. Each one proof that contribution is enough.

Numbers at scale are hard to feel. Ten million is a statistic. So before we talk about what MyVanga becomes at ten million contributors, let us talk about what it means.

Ten million is not a growth target. It is ten million individual decisions that something different was possible — and worth building.

PORTRAITS AT SCALE

COIMBATORE, INDIA

Arjun, 30

He still drives. But for the first time, he also owns something. His \$MYVA balance represents two years of daily presence. He votes on treasury grants. His sister joined six months after him — her streak is longer than his.

— Contributor → Governor

LAGOS, NIGERIA

Amara, 24

A seamstress who used MyVanga Fund to crowdfund a second sewing machine. She repaid the community by bringing in forty contributors from her neighbourhood. Her referral boost has compounded quietly for eighteen months.

— Builder → Funder

MANILA, PHILIPPINES

Danilo, 41

A jeepney driver who locked his tokens for 180 days six times over. He did not know what a DAO was when he joined. He knows now — because the one he is part of just voted to fund a community health initiative in his district.

— Earner → Stakeholder

DHAKA, BANGLADESH

Priya, 19

She joined at seventeen. One of MyVanga's top miners in her city — not because she gamed the system, but because she never missed a day. She is now on the Advisory Council. She has never owned a credit card.

— Consistent → Council

At scale, MyVanga is not a platform. It is a precedent. Proof that a digital economy built on contribution — not capital — can sustain itself, govern itself, and grow itself.

WHAT WE BELIEVE

We believe that every person who shows up deserves to be recognised for it.

We believe that contribution — not capital — is the most honest measure of value.

We believe that the people who build a thing should own a piece of it.

We believe that trust must be earned before power is transferred.

We believe that an economy is only as strong as the people who believe in it — and act.

We believe that 11,011,011,011 tokens, earned honestly, can change more than any amount of capital ever speculated.

We believe in Arjun. In Amara. In Danilo. In Priya. In every person who looked at a world that excluded them and decided to build a better one anyway.

We believe contribution is the new capital — and we are building the economy to prove it.

This is not the end of the whitepaper. It is the beginning of what comes next — and what comes next belongs to you.

08 · DISCLAIMERS

We have told you what we believe. Now let us tell you what we don't know.

Every whitepaper ends with a legal disclaimer. Most bury it in a wall of small-print designed to be skimmed. This one is different — not because the legal realities are different, but because the people reading this deserve to understand them clearly. Plain language is a form of respect.

Honesty about risk is not a weakness in a project. It is the foundation of the trust that everything else is built on.

NOT FINANCIAL ADVICE

\$MYVA is not an investment

\$MYVA is a utility and governance token. It is earned through contribution and spent on real services within the MyVanga ecosystem. It is not designed, marketed, or intended as an investment vehicle.

FORMAL STATEMENT · This document does not constitute financial, investment, legal, or tax advice. \$MYVA tokens are utility tokens. Nothing herein shall be construed as a solicitation, offer, or recommendation to buy, sell, or hold any financial instrument.

TOKENOMICS MAY EVOLVE

The model can change — with the community's consent

After one million contributors, or twelve months — whichever comes first — the community DAO may vote to evolve the model. What will not change: the 11,011,011,011 supply cap and the 60% allocation to contributors.

FORMAL STATEMENT · MyVanga tokenomics, mining rates, and governance parameters are subject to revision following Phase 1. The maximum supply of 11,011,011,011 MYVA is immutable.

MAINNET MIGRATION

Phase 1 balances will be audited before they move

The tokens you earn in Phase 1 are real. Before any balance moves to MyVanga Mainnet, it will be independently audited and verified. We will not migrate until we are certain the process is secure, transparent, and fair.

FORMAL STATEMENT · Token balances accumulated during Phase 1 are subject to audit and verification prior to migration. Balances that cannot be verified as legitimately earned will be disqualified.

TECHNOLOGY RISK

Blockchain is powerful — and not without risk

Blockchain infrastructure, smart contracts, and decentralised systems carry risks that even careful engineering cannot fully eliminate. An emergency shutdown clause requires two-thirds of the trust committee to activate.

FORMAL STATEMENT · Participants acknowledge the risk of loss due to technology failure, software vulnerabilities, network attacks, or regulatory changes. MyVanga does not guarantee the uninterrupted operation of its platform.

KYC AND COMPLIANCE

Some features require identity verification

MyVanga operates in a world with real laws. Depending on where you live and which features you use, identity verification may be required.

FORMAL STATEMENT · Participation in certain MyVanga services may require KYC verification. MyVanga complies with applicable AML and CTF regulations in jurisdictions where it operates.

REGULATORY LANDSCAPE

The rules around crypto are still being written

Governments around the world are still figuring out how to regulate digital assets. MyVanga is designed to comply with applicable law in every jurisdiction it operates.

FORMAL STATEMENT · The regulatory environment for digital assets is subject to rapid change. Participants are responsible for ensuring their participation complies with local law. MyVanga reserves the right to restrict access where required by law.

WHAT WE CAN PROMISE — AND WHAT WE CANNOT

We can promise The 11,011,011,011 supply cap will never change. That number is the first commitment MyVanga makes, and it is permanent.

We can promise	60% of all tokens will always be allocated to the community that earns them. That allocation is the founding principle.
We can promise	Governance will transfer to the community — not because we are required to, but because the entire point of MyVanga demands it.
We cannot promise	A token price. We will not attempt to. Anyone who does is not being honest with you.
We cannot promise	That the road ahead will be without obstacles. Technology fails. Regulations shift. What we can promise is that when these things happen, we will face them openly — with the community, not in spite of it.
We can promise	That every decision we make will be measured against one belief: contribution is the new capital.

Participate with your eyes open. Contribute because you believe in what is being built. Vote when the time comes because your voice matters. An informed community is the only kind that can govern itself well.

Document information

This document is the MyVanga Phase 1 Whitepaper, covering the period from Genesis to one million contributors. Tokenomics and governance parameters are subject to community DAO revision post-Phase 1. This document does not constitute a prospectus, offering memorandum, or financial product disclosure. MyVanga is a non-profit, trust-governed digital ecosystem. \$MYVA is a utility and governance token. All figures are accurate at the time of publication. For the most current information, visit myvanga.com.

“Contribution is the new capital.”

myvanga.com · \$MYVA · 11,011,011,011
